EDUCATION

New Jersey Institute of Technology

B.S. in Computer Science, Minor in Business Information Systems, Artificial Intelligence

Sep. 2023 – May 2027

Newark, NJ

EXPERIENCE

Quantum Pulse Consulting

Technical Project Manager Intern

Apr. 2026 – Aug. 2026

Detroit, MI

- Led a 6-engineer team building Project Nudge, a cross-platform AI productivity and Agile platform in Flutter, FastAPI, Firebase, Firestore, and OpenAI, designing the sprint breakdowns as well as directly contributing.
- Directed architecture and contributed hands-on across Flutter clients and a 57-endpoint FastAPI backend (10 route modules, 21 service modules) spanning tasks, sprints, scheduling, analytics, and notifications.
- Built text-to-task AI workflows using intent detection, extraction, and Pydantic validation, with clarification prompts for missing fields validated by unit tests covering ambiguous phrasing and malformed AI output.
- Implemented multi-tenant workspaces, role-based access, Firestore security rules, automated testing, and Docker/Nginx deployment.

Quantum Pulse Consulting

Software Engineer Intern

May 2025 – Sept. 2025

Detroit, MI

- Built a cross-platform AI habit-tracking app (web, iOS, Android) in Flutter, Firebase, and Firestore, internally tested by an 8-person team over a 4-month, full-time internship.
- Developed 5-dynamic habit flows, 4-AI coach personas, and real-time chat interfaces using Flutter and React.
- Developed 20+ backend endpoints with Firebase Cloud Functions and Node.js to support asynchronous agent workflows and real-time updates.

New Jersey Institute of Technology

Robot Tiles Research Assistant

Oct. 2024 – Aug. 2025

Newark, NJ

- Implemented a slime-mold-inspired distributed coordination algorithm, designed by a faculty advisor, on Arduino hardware, tested across a 30-robot simulation and a 4-robot physical swarm
- Built communication protocols for multi-robot data exchange, substantially reducing dropped and malformed messages compared to the prior implementation
- Tested and optimized embedded systems to enhance scalability and performance across larger robotic networks.

PROJECTS

CandidATS | *Next.js, TypeScript, PostgreSQL, Supabase, Tailwind, Gemini API*

Feb. 2026 – May 2026

- Engineered a full-stack applicant tracking system for managing 100+ job applications through a centralized dashboard.
- Developed 35 RESTful APIs with Next.js and Node.js and implemented authentication using Supabase Auth.
- Implemented centralized error handling and logging across all 35 API endpoints, consolidating error logic into reusable functions for CRUD and auth routes and adding detailed error-context logging.
- Integrated Google Gemini API to rewrite resume bullets using job-specific context, tested against real resumes and job postings.

Stock Price Prediction Using LSTM | *Python, TensorFlow/Keras, Yahoo Finance API*

Oct. 2025 – Dec. 2025

- Built an LSTM-based deep learning model to forecast stock prices, improving predictive accuracy by leveraging time-series sequence modeling with TensorFlow/Keras.
- Preprocessed and transformed financial data (feature scaling, normalization, and sliding window sequencing) using Pandas and NumPy to enhance model performance and stability.
- Ingested and managed large-scale historical stock datasets via the Yahoo Finance API, enabling efficient training and evaluation workflows.

TECHNICAL SKILLS

Languages: Java, Python, C, C++, SQL, JavaScript, TypeScript, HTML, CSS, PHP, Dart, MATLAB, Bash

Frameworks: React, Next.js, Flutter, Bootstrap, Tailwind CSS, Node.js, Flask

Developer Tools: Git, Docker, Google Cloud Platform, Heroku, VS Code, Visual Studio, PyCharm, IntelliJ, Eclipse

Libraries: pandas, NumPy, Matplotlib, scikit-learn, seaborn, imbalanced-learn, TensorFlow, Keras, PyTorch, NLTK
